

**RE: MELAMINE**

Jost Chemical does not consider the below listed product to be at risk for contamination with melamine:

- **Ferric Phosphate**

This lack of melamine contamination risk is based upon the following:

- The above mentioned product is manufactured by Jost Chemical via chemical synthesis.
- This product does not contain nitrogen and, as such, is not considered “at risk” for intentional adulteration with melamine.
- None of the raw materials used for manufacturing are considered “at risk” for melamine contamination.
- The Jost manufacturing process does not use milk or dairy products as raw materials or processing aids.
- The above-mentioned product is not manufactured with raw materials or processing aids that are derived from milk or dairy products.
- Jost Chemical does not inventory or use melamine or any melamine analog / derivative such as cyanuric acid.
- Jost Chemical does not inventory or use any cleaning agent or lubricant that contains melamine or any melamine analog / derivative such as cyanuric acid.
- **Based upon raw material knowledge and processing knowledge, Jost Chemical herein guarantees all lots of Ferric Phosphate are melamine free.**
